

I support BPL (Broadband Over Power Line). This new technology will offer the Internet, VoIP, VOD, Telephony, Security to hundreds of thousands of U.S. citizens that can't have these services now for whatever reason. The ability to offer these services via 120V receptacles throughout an entire school, institution or business facility will aid teachers to better educate our children...just to name one huge benefit.

I am familiar with electric utilities, its construction and equipment having been in the electrical distribution business for over three decades. I have also been an advanced class amateur radio operator for over two decades. In my opinion the ARRL issue over interference (Part 15) has been made into something far greater (by them) than it should be. Please don't let the ARRL and selected radio operators (hobbiest) stand in the way of our next technology wave. I also suggest that the FCC not impose any new restrictions for BPL that would impede its offering to the public.

I support the decision to fully allow BPL to take affect as soon as possible.

Sincerely,
Bob Crews
